

GUIDANCE ON THE SAFE USE OF HAMMERS

Thank you for purchasing a Sealey product. Manufactured to a high standard, this product will, if used according to these instructions, and properly maintained, give you years of trouble free performance.

Refer to instruction manual

Wear eye protection

IMPORTANT: PLEASE READ THESE INSTRUCTIONS CAREFULLY. NOTE THE SAFE OPERATIONAL REQUIREMENTS, WARNINGS & CAUTIONS. USE THE PRODUCT CORRECTLY AND WITH CARE FOR THE PURPOSE FOR WHICH IT IS INTENDED. FAILURE TO DO SO MAY CAUSE DAMAGE AND/OR PERSONAL INJURY AND WILL INVALIDATE THE WARRANTY. KEEP THESE INSTRUCTIONS SAFE FOR FUTURE USE.

1. GENERAL SAFETY

Perform a risk assessment before using the hammer. Ensure the area is clean and well lit. Always wear appropriate clothing, eye protection and footwear when using a hammer. Additional PPE may be required depending on the task at hand. **DO NOT** use this product if you are tired or under the influence of drugs, alcohol or medication.

2. HAMMER TYPE

Always select a suitable hammer, of the appropriate type, size and weight, for the job concerned. See table below.

TYPE OF HAMMER	DESCRIPTION	USE
Claw hammer	Has a curved claw on one end for prying and a flat face on the other end for striking.	Used for general carpentry tasks such as nailing, pulling nails, and prying.
Ball-pein hammer	Has a round, domed face on one end and a ball-shaped pein on the other end.	Used for forging metal, shaping sheet metal, and riveting.
Deadblow hammer	Has a solid metal head that is filled with lead or another heavy material.	Used for striking without damaging the surface being struck.
Framing hammer	Has a long handle and a large, heavy head.	Used for framing walls and other construction tasks.
Mallet	Has a large, smooth head made of wood, rubber, or plastic.	Used for tasks that require a soft strike, such as driving chisels or shaping wood.
Sledgehammer	Has a very large, heavy head.	Used for demolition and other heavy-duty tasks.
Tapered pin hammer	Has a tapered, pointed head.	Used for driving tapered pins and other small objects.

3. WEAR SAFETY GOGGLES

Always wear safety goggles when using a hammer. This is especially important when hammering hard materials and in circumstances where materials are likely to chip and fly.

4. STRIKING TOOLS

When striking chisels, punches, wedges, or other tools, the striking-face of the hammer should be larger than the head of the tool being struck. For example, a 12mm cold chisel-head requires at least a 25mm hammer face.

5. MASONRY NAILS

Masonry nails, which are hardened, should only be struck with a lump or clubhammer. It is essential that safety goggles are worn when driving these nails.

6. STRIKING TECHNIQUE

Always strike squarely and avoid glancing blows. Never strike with the side cheek of a hammer head and never strike a material which is harder than the hammer head. Never strike two hammer head faces together.

7. INSPECT BEFORE USE

Never use a hammer with a loose or damaged handle and discard any hammer if the head shows any sign of excessive wear, mushrooming, chipping, dents, etc. Never attempt to refurbish hammer faces. Attention is drawn to the use of light hammers with elongated heads, such as the welder's chipping hammer, since, whilst handle tests and assembly are appropriate to the mass of the tool, the mode of use can be particularly prone to loosening of handles.

8. STORAGE - WOODEN HAMMERS ONLY

Always store wooden handled hammers at ambient temperatures. **DO NOT** store in a heated warehouse or storage place as this is a significant cause of loose hammer heads, due to the drying out of the wooden handles.

9. INSPECT REGULARLY

Inspect hammers regularly to ensure they are fit for purpose. If in doubt, seek specialist advice or contact the manufacturer.

ENVIRONMENT PROTECTION

Recycle unwanted materials instead of disposing of them as waste. All tools, accessories and packaging should be sorted, taken to a recycling centre and disposed of in a manner which is compatible with the environment. When the product becomes completely unserviceable and requires disposal, drain any fluids (if applicable) into approved containers and dispose of the product and fluids according to local regulations.
